

Hello my name is Ananya. The experience at Perkins was very enjoyable and informative. It helped me place myself in the working environment of the engineering sector and made me realise the different opportunities available. The highlight for me was the Engine Appreciation as well as the SWE worktop as we were doing the job ourselves and being hands on. This was a very valuable experience which will help me in the future.

My highlight of the trip was the engine appreciation where we stripped an engine apart, this is as I learnt a lot of about the contents of an engine which was both impressive and interesting. Other highlights include SWE which was a fun learning experience. Overall I had a great time and wouldn't hesitate accepting an offer to go back again. I'm glad I went.

STEM Work experiences

Hello my name is Reece, I really enjoyed the trip and the things I have learnt were very valuable. The highlight of the Perkins trip for me was learning about the company and the history behind it. The engine appreciation was also a highlight for me as I am really interested in engines. It was a very exciting receiving the some of the same training as Perkins employees.

P.S The turbocharger really boosted my knowledge
